

Trusted advisor in the office...

GeoPro Data Center is a dynamic decision support system designed specifically for mosquito control operations.

GeoPro unlocks the power of Web database technology to provide a single solution for tracking activities and results including service requests, surveillance, treatments and inventory.

GeoPro is provided by ADAPCO and maintained by a world class managed services provider over a private network. This ensures your mosquito control data is 100% secure and accessible 24/7 from any connected PC.

Experience the direction of your GPS data. GeoPro Data Center stores and displays all your geographical data from a single platform over a variety of background maps. This visually displayed data will empower decision makers in your operation.

GeoPro Data Center is new and innovative and will continue to evolve based on the needs of you, the professional user. We at ADAPCO value your comments and welcome you to visit www.MyGeoPro.com today to learn more and experience a free trial membership.

...Powered by ingenuity in the field

GeoPro Mobile Scout takes the power, flexibility and intuitiveness of GeoPro Data Center to the field.

Say goodbye to the clipboard; improve the speed and accuracy of your field data collections.

The Mobile Scout provides a variety of electronic forms for gathering common mosquito control data. Trap collections, weather sensors, even ground based applications are a snap with the Scout.

Automatic file synchronization makes daily uploads to GeoPro fast and simple. Plus, Mobile Scout operates on Windows Mobile 6 devices.

GeoPro Mobile Scout is rugged, reliable, and ready to use. We at ADAPCO value your comments and welcome you to visit www.MyGeoPro.com today to learn more.
